

DCM Grinding Solutions

With over 30 years of machine design and manufacturing experience, DCM Tech builds a line of industrial grinders for a variety of applications. DCM grinders offer fast, close tolerance performance whether grinding metal, glass, carbide or ceramic. Innovative control packages provide process automation and repeatability. Integral mist collection and coolant filtration systems enhance grinding performance as well as shop cleanliness and operating conditions.

IG 280/281 SD

Exceptional programmable grinders for production or job shop work. The SD control lends itself readily to rapid part changeover, short run prototyping and lab work. The 280 vs 281 machine configurations provide alternative head positioning options.

IG 180 SD

Compact machine footprint for small component, glass and ceramic applications. All of the 180 M features plus conversational "SD" programmable control provide convenient process automation as well as precise manual operation.

IG 180 M

Versatility and precision for production and job shop work. Variable speed spindle and rotary table provide a wide selection of part finishes and enhanced abrasive utilization. Full enclosure, mist collection and coolant filtration keep the environmental footprint small.

IG 080 M

Economical grinder for general shop work as well as dedicated applications. A wide variety of abrasives and available fixtures have made this grinder a favorite for such diverse applications as aircraft brake rotors, meat processing plates, carbide dies, and glass processing.

PDG Punch & Die Grinder

The ultimate for sharpening turret press punches and dies, with ease and automation. The large capacity tooling and extra horsepower provide grinding versatility for progressive die components and other tool applications.

MINI

Practical and economical tool sharpening with "no compromise" speed and performance. Even low volume users can afford the benefits of quality tool maintenance and rotary grinder capabilities.
